BOOK PROJECT

In the Shade of the World Tree: Cocoa and the Interspecies Understory of Life on Earth
In the Shade of the World Tree takes readers on an expansive journey across the coevolutionary history of humanity and cocoa. Ten thematic essays weave together to go beyond existing ‘bean-to-bar’ narratives and explore cocoa in its fascinating but lesser-known contexts. The resulting book is a stimulating concoction made of equal parts politics, economics, religion and ecology, whisked in narrative, marinated in history, and peppered with insights gleaned from extensive field research. The book is chock full of rich cocoa stories that travel betwixt great civilizations, magical molecules, thorny questions, and profound cosmologies, helping to uncover hidden connections between subjects, societies, and species and reveal the brilliant complexity that lives at the heart of a familiar foodstuff.
